

## **RECOMMENDATIONS FOR NEWLY PLANTED SOD**

- Water restrictions are lifted for first 60 days of ‘establishment period.’
  - We recommend:
- 25 minutes 7 days a week is best to ensure a long-term healthy, hardy lawn
- 25 minutes 3 days a week is minimum to hopefully survive
- We also recommend residents read the irrigation booklet and understand how to work the system
- We recommend residents check it several times per week for the first 30-60 days.
- We recommend residents check it after storms or possible power outages
- We recommend residents ensure that all of the separate programs (A, B C...) are programmed to their desired setting.
- We recommend budgeting \$1000 during the first 60 days for extra watering as this will save more over the life of the lawn.
